

## Age-adjusted Percentage of Nebraska Adults with a Lifetime Diagnosis of High Blood Pressure\* by Race/Ethnicity, 2011

\*Adults who have ever been told by a doctor, nurse, or other health professional that they have high blood pressure

\*\*Adults were only asked during 2011 if they had diagnosed High Blood Pressure

^Individuals who identified more than one race but did not specify a preferred race

Note 1: Race/ethnicity categories are non-overlapping; Hispanics can be of any race

Note 2: Confidence intervals that do not overlap are determined to be statistically different from one another (where  $p < .05$ )
